TaRA-5000

INSTRUCTION

MANUAL

The Taxidermic Rejuvenation Archetype 5000

was designed after my late wife, Tara. Tara passed away suddenly after her 35th birthday from an undetermined illness. And like so many others, after she passed I was lost and hopeless without her - without the one I loved so dear, beside me. I could no longer hear her laugh or relish in her smile. The weight of her memory made me miss her even more. So I decided to change that. I decided that I no longer wanted to live without my wife by my side. Why should we allow Death to keep us from the ones we love? The answer is simple - we shouldn't. And now, we don't have to. Through experimentation I generated a new, revolutionary form of taxidermy which would give you a different way to spend eternity with the ones you love.

The TaRA-5000.

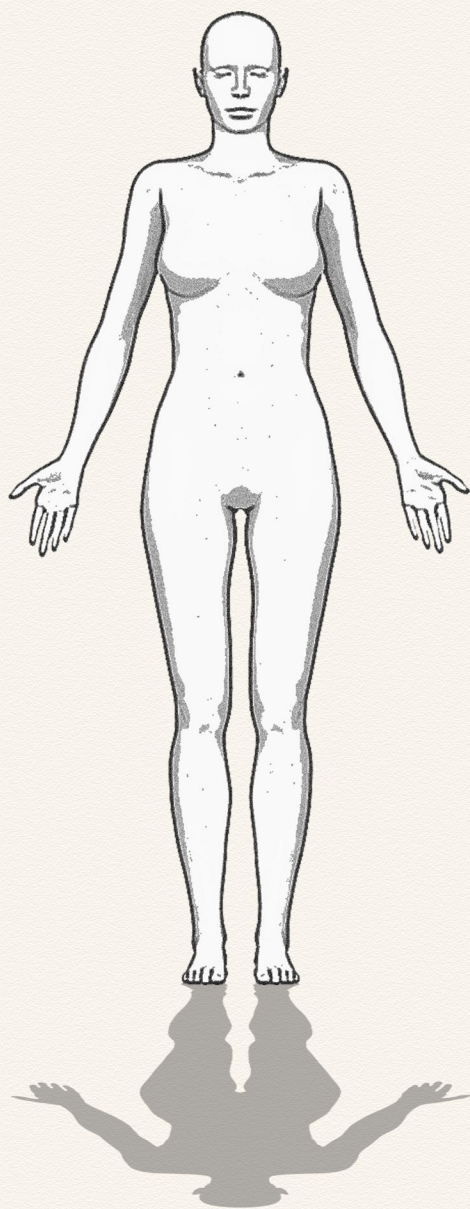

“even after Death, you need not part”

Roger Williamson

NOTES	

Using your **TaRA-5000**

Your **TaRA-5000** was not designed to be a trophy, or an artifact you should mount in your home - unlike traditional taxidermy, it was designed to allow you the freedom to reconnect, physically as well as spiritually, with your recently departed loved one. That being said, you should take your **TaRA-5000** for a walk, have a picnic, or enjoy a nice relaxing day at the beach.

**Now is the time to take back what was lost
and enjoy this time together.**

Your new **TaRA-5000** can be operated in the same manner as the human body. You should be aware that your **TaRA-5000**'s joint pivotal array (JPA) was designed and engineered with the human skeletal system in mind. The JPA is tungsten based to prevent staining and breakage and is fused directly onto the existing skeletal system to provide lasting durability.

That being said, please feel free to pose and maneuver your **TaRA-5000**'s body parts the same way you would your own.

The facial features of your **TaRA-5000** were carefully articulated to give you full functionality. You can open or close both eyelids, raise or lower both eyebrows, you can even open, close or purse the lips. So fret not when it comes to taking those family portraits, your **TaRA-5000** will look as *alive* as when they actually were!

Although your **TaRA-5000** is in fact an inanimate object of sorts, it will need some care and maintenance as time goes on. When you have a moment, please head over to page 9, which begins the **Care & Cleaning** section.

Using your **TaRA-5000**

OMNI-CORE™

The **TaRA-5000** is unique because of its patented **OMNI-CORE™**.

The **OMNI-CORE™** was designed to capture & store memories as well as new aural & visual information relayed through your **TaRA-5000's** Cerebral Cortex, onto a *four exabyte hard drive*. This part of the brain will continue to remain functional through *Oscillation* - timed electrical impulses set upon connection that will continue to pulse for over 100,000 hours!

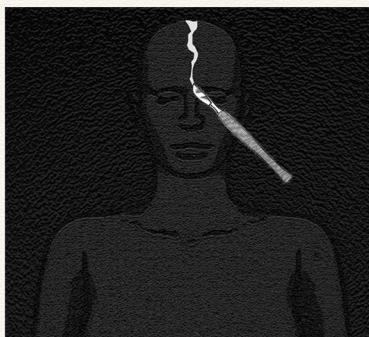

In addition to storing memories, the **OMNI-CORE™** is also responsible for the continuous circulation of fluids throughout your **TaRA-5000**. Specially formatted for use with your **TaRA-5000**, the **OMNI-CORE™ OS V**, a self-aware operating system, handles the day to day operations within your **TaRA-5000**.

DISCLAIMER: If your new TaRA-5000 begins to display signs of *irregularity* please contact Dr. Roger Williamson at [516] 845-3882.

QUICK START SETUP

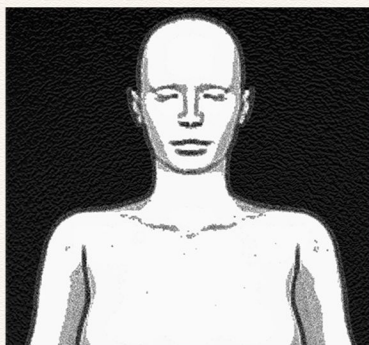

1. CUT PLASTIC MEMBRANE

Carefully cut a small incision along the mid-seam in the plastic membrane which is housing your **TaRA-5000**. Be careful not to cut more than 1/8" deep as you can damage your **TaRA-5000**.

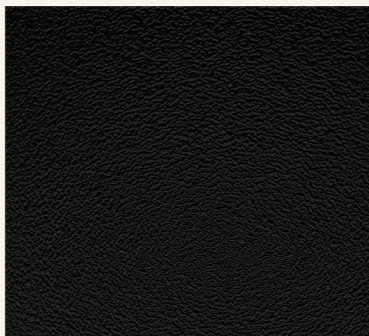

2. REMOVE PLASTIC MEMBRANE

With your fingers, peel away the plastic membrane to access to your **TaRA-5000**.

3. REMOVE TaRA-5000

Gently remove your **TaRA-5000** from the shipping box.

QUICK START SETUP

4. PLACE TaRA-5000 DOWN

Place your **TaRA-5000**, in a seated position, on a chair or other comparable seat.

5. MASSAGE TaRA-5000

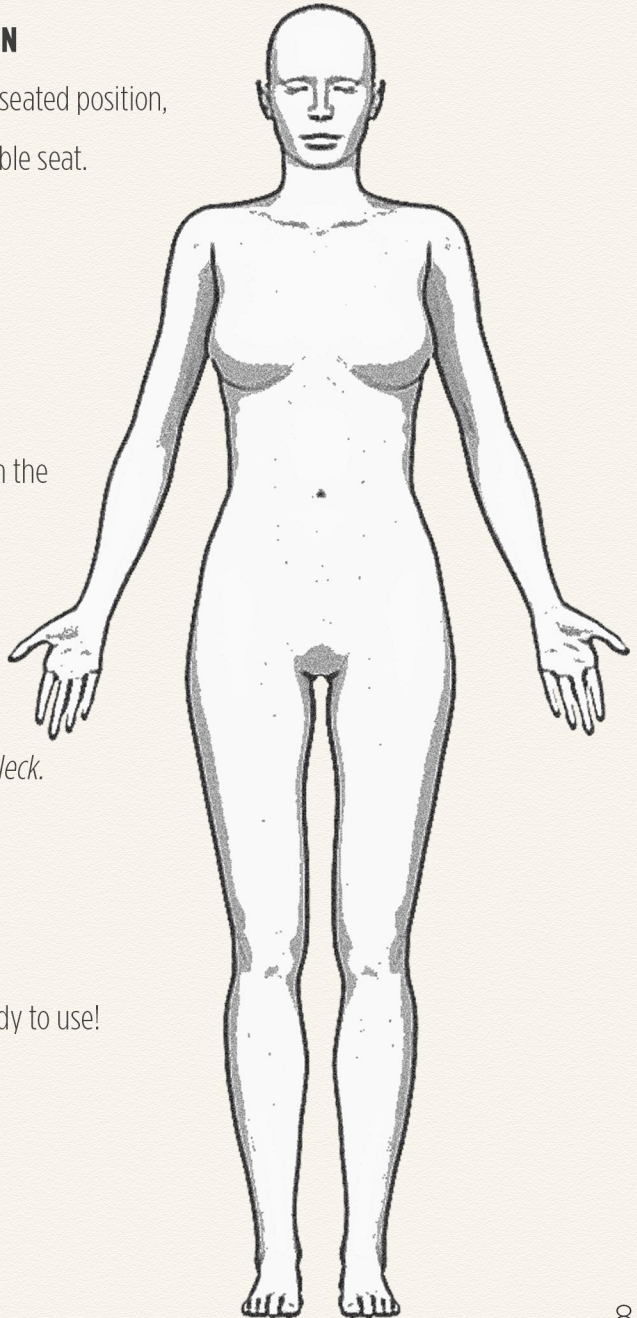

Gently massage and work in the joints and muscles of your

TaRA-5000 -

*Feet, Ankles, Calves, Knees,
Thighs, Wrists, Forearms,
Elbows, Biceps, Shoulders, Neck.*

6. READY TO USE

Your **TaRA-5000** is now ready to use!

Care & Cleaning

Understanding how to use your **TaRA-5000** (p5) is essential to caring for it. Your **TaRA-5000** is durable and can withstand some minor bumps and bruises, however you should bear in mind that your **TaRA-5000** is Human at the core. So you should treat it like you would any other Human Being.

Cleaning Your **TaRA-5000**

Hair & Skin - The biggest thing all **TaRA-5000**s have in common is they have the tendency to become dust collectors! The very nature of hair - be it from the follicles in the head or in the skin - tends to generate a static electric "field", which is an attractant for dust. Regular, weekly dusting with a soft lint-free cloth will keep your **TaRA-5000** looking new for years to come. If your **TaRA-5000**'s epidermis becomes dirty or soiled for any reason, you can clean the area(s) with a little soap & water and then dry it using a soft lint-free cloth. You can also use *lotions or *oils to keep the epidermis looking and feeling silky smooth!

Eyes - Over the course of time, the eyes of your **TaRA-5000** can become "dull and listless." They can easily be brightened up with a tiny amount of *glass cleaner* applied to a flat **Artist's Brush**. Carefully wipe the brush over the eyes until they appear bright and clear again. Use a double-end cosmetic swab to *gently* rub the eye clean and dry. You also want to avoid using an ammonia-based cleaner on any of the finished fleshy parts, such as the eyelids. The ammonia contained therein can dry the oils in the skin causing cracks to appear over time.

Fingernails & Toenails – The fingernails of your **TaRA-5000** will not grow but may start to lose their shine as time goes on. In order to keep your **TaRA-5000**'s fingernails looking new and beautiful you can polish the nails with either a clear coat (men) or a favorite color (women)! Nail polish, be it clear or color, will fade and crack over time but you can use nail polish remover to remove the polish and then start over. Be sure not to get any of the polish, or remover, on the skin because it may cause the skin to crack.

Care & Cleaning

Nose & Ears - The nose and ear canals may get a little dusty, but can be cleaned using a double-end cosmetic swab. You may also use a dampened cotton ball to clean more heavily soiled areas.

Teeth - Your **TaRA-5000**'s teeth can be cleaned using a double-end cosmetic swab. Simply dampen the swab, with warm water, on one end and use that end to clean the teeth. You can then use the other end to dry them. Because your **TaRA-5000** is not "living", per se, there should be not plaque buildup around the teeth and gum area. Should you see plaque build up, please contact T&RW Taxidermy immediately.

Mouth & Lips – The mouth can be cleaned using a damp lint-free cloth. Simply dampen the cloth with warm water, squeeze out any excess water, and clean from the back of the mouth to the front. To keep the lips moist, we recommend using a mild lip balm or lip gloss.

Like anything of value in your home, your **TaRA-5000** deserves and needs regular care to maintain it and keep it looking as new as can be!

Maintenance Schedule

Time with TaRA-5000	Reason For Visit
15,000 Hours	Routine Check-up & Cleaning This includes, but is not limited to - JPA Adjustments, Eye Cleansing, Nail Cleansing, Hair & Skin Cleansing, Massage
25,000 Hours	Fluid Transfusion *Female Model ONLY*
30,000 Hours	OMNI-CORE™ Back up The OMNI-CORE™ HDD may become fragmented, so we will preform a full backup every 30,000 Hours
45,000 Hours	Fluid Transfusion *Male Model ONLY*
60,000 Hours	Full System Flush & Clean
100,000 Hours	OMNI-CORE™ Transference OMNI-CORE™ HDD mirroring and drive swap

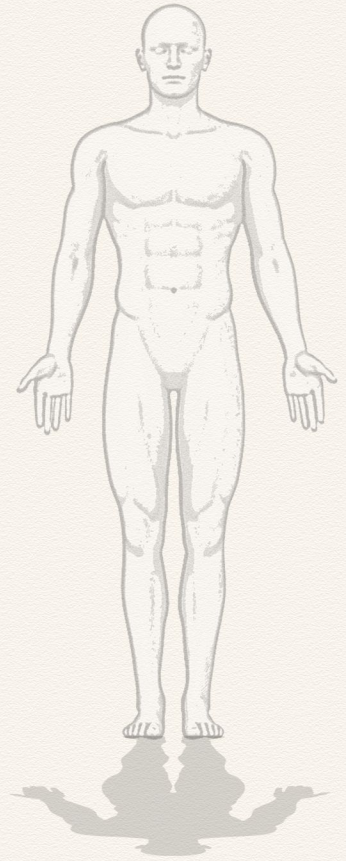

Troubleshooting

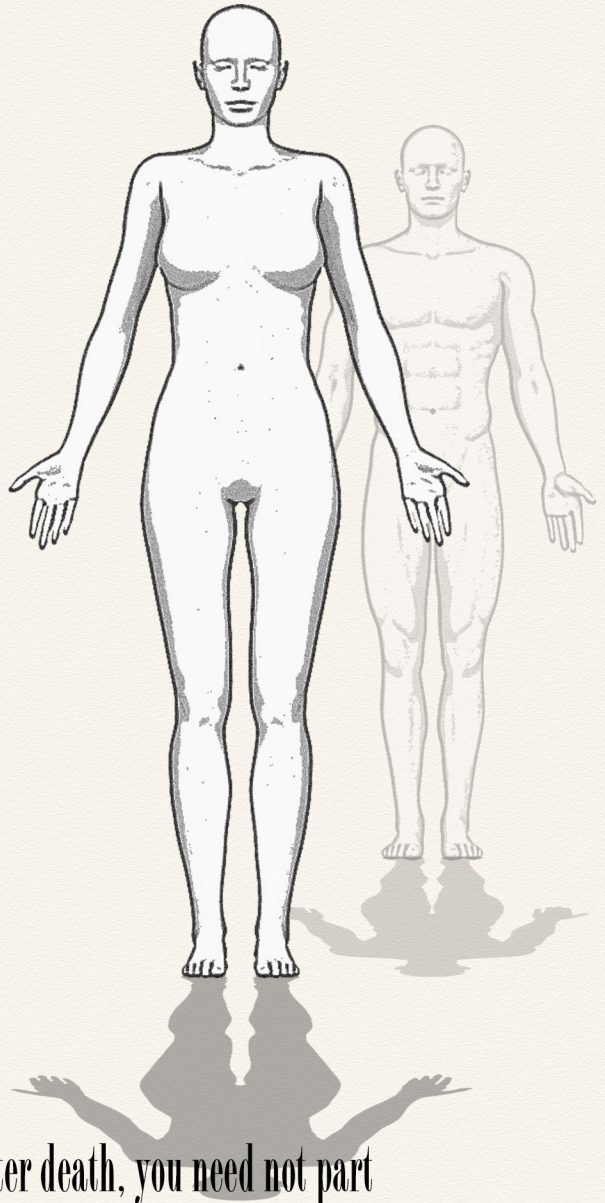

Problem	Solution
<p>My TaRA-5000's JPA is stiff, tight and difficult to move.</p>	<p>Over time, your TaRA-5000's JPA may become stiff or tight if not moved or adjusted for an extended period of time. The most effective way to handle this is to gently massage the area around the JPA you are having trouble moving. In addition to massaging the area, gently move the JPA back and forth, without force as to not risk damaging the JPA. The massage plus the movement of the JPA should fix the problem. If the issue remains, please contact T&RW Taxidermy to schedule a check-up.</p>
<p>My TaRA-5000's muscles are stiffening</p>	<p>Much like the JPA, over time, your TaRA-5000's muscular system may become stiff or tight. The most effective way to handle this is to soak your TaRA-5000 in "lukewarm" water for about 10-15 minutes. The warm water will aid in loosening the muscles. After you remove your TaRA-5000 from the water and dry him/her off, you can gently massage the muscles that are tight to get them into a more limber state. If the issue remains, please contact T&RW Taxidermy to schedule a check-up.</p>
<p>My TaRA-5000 is limp and will not sit up or stand up straight without support</p>	<p>If you are experiencing limp limbs with your TaRA-5000, you need to schedule an appointment for a fluid transfusion. The reason why this is happening is because the muscular system is failing to pump the required amount of liquid plasma from the</p>

Troubleshooting

Problem	Solution
	<p>OMNI-CORE™ to the muscles. If this goes untreated for too long the muscles will liquefy and you will need to amputate the limbs that remain limp.</p>
<p>My TaRA-5000's head is twitching at random intervals</p>	<p>This could be happening for a few reasons. First we need to decipher what interval the head is twitching at:</p> <p><i>1 Slow Twitch repetitiously</i> - This happens when the neck muscles are too tight and are pinning an OMNI-CORD™ against the exoskeleton. You can fix this by gently massaging the neck and shoulders for a few minutes.</p> <p><i>2 Quick Twitches repetitiously</i> - This happens when the ear canals become pressurized. You may see this during a change in season when there is more moisture in the air than usual. You can fix this by sticking a finger in each ear canal and gently massage in a clockwise motion for 3 minutes.</p> <p><i>2 Slow Twitches, followed by 2 Quick Twitches repetitiously</i> - This can happen if your TaRA-5000 goes without a full body massage for an extended period of time beyond the 15,000 hour check-up. You can temporarily fix this by applying pressure to each of your TaRA-5000's palms simultaneously for 2 minutes. You should then bring in your TaRA-5000 for a check-up within the next 48 hours.</p>

Problem	Solution
	<p><i>3 Quick Twitches</i> - If this happens, you need to contact Dr. Roger Williamson at [516] 845-3882 right away. This is not a normal occurrence and needs to be dealt with promptly. There is no reason for this occurrence other than your TaRA-5000 needs a complete system wipe. We apologize for any inconvenience if this does in fact happen.</p>
<p>My TaRA-5000 is moving around on his or her own</p>	<p>If this happens, you need to contact Dr. Roger Williamson at [516] 845-3882 right away.
